

JUDOHUB — MASTER PRODUCT DESIGN PACK

Product Vision

Core Identity

JUDOHUB is not a judo encyclopedia.

It is a:

Pocket training companion for busy judoka.

Focused on:

- Fast learning
- Grading preparation
- Practical understanding
- ADHD-friendly usability
- Beautiful mobile-first design
- Low-friction practice support

The emotional outcome should feel like:

- Calm
- Focused
- Motivating
- Clean
- Premium
- Helpful within 15 seconds

Users should NEVER feel:

- overwhelmed
- buried in text
- trapped in menus
- forced into long sessions
- academically exhausted

Product Positioning

What Judohub IS

- Training companion
- Visual learning system
- Technique memory aid
- Grading support tool
- Randori improvement assistant

- Drill discovery tool
- Modern judo learning platform

What Judohub IS NOT

- Wiki
 - Coaching certification platform
 - Long-form curriculum website
 - Forum
 - Spreadsheet dashboard
 - Analytics-heavy system
-

Core User Personas

1. Busy Adult Judoka (Primary)

Profile

- Age: 25–45
- Works full time
- Trains 1–3 times/week
- Wants grading progression
- Often forgets terminology or details between sessions

Pain Points

- Doesn't have time for long reading
- Forgets combinations
- Doesn't revise consistently
- Wants fast answers before class

Needs

- Quick reference
 - Visual learning
 - Low cognitive load
 - Structured progression
 - Confidence before grading
-

2. ADHD Learner (Primary)

Profile

- Easily overwhelmed
- Avoids dense interfaces
- Learns visually
- Benefits from chunked information
- Needs fast reward loops

Design Needs

- Large tap targets
 - Card-based UI
 - Minimal text walls
 - Progressive disclosure
 - Short visual learning loops
 - Clear navigation hierarchy
-

3. New Judoka (Secondary)

Needs

- Understand terminology
 - Learn basic throws
 - Build confidence
 - Avoid intimidation
-

UX Philosophy

Design Principle #1

One Screen = One Goal

Every screen should answer ONE question.

Examples:

- What is Tai Otoshi?
- How do I enter?
- What are common mistakes?
- What do I need for Yellow Belt?

Never overload a screen.

Design Principle #2

Progressive Disclosure

Reveal information gradually.

DO:

- Quick summary first
- Deeper content optional
- Cards expand only when needed

DON'T:

- Massive scrolling pages
 - Huge paragraphs
 - 15 sections open simultaneously
-

Design Principle #3

Touch First

Every interaction should feel comfortable with one thumb.

Mobile-first ALWAYS.

Design Principle #4

Visual Before Text

Humans learn movement visually.

Prioritise:

- thumbnails
- motion loops
- annotated imagery
- short clips
- visual hierarchy

Text supports visuals.

Not the other way around.

Design Principle #5

Reduce Friction Everywhere

The app should feel:

- instant
- obvious
- forgiving
- lightweight

No unnecessary steps.

Visual Language

Theme

"Premium Dark Dojo"

Inspired by:

- modern martial arts brands
 - premium fitness apps
 - cinematic sports visuals
 - Japanese minimalism
-

Color Direction

Base

- Deep charcoal
- Soft black
- Muted graphite

Accent

Choose ONE primary accent initially:

Recommended:

- Red
- Amber
- Ice blue

Success

- Belt-color progression accents
-

Typography

Headlines

Strong. Wide. Minimal.

Body Text

Short. Chunked. Readable.

Rule

No paragraph should feel intimidating.

Homepage vNext Blueprint

Goal

The homepage should answer:

"What should I do right now?"

NOT:

"Here is every feature in the app."

Homepage Structure

1. Hero Header

Large welcome card.

Example:

"Ready for tonight's training?"

Subtext:

"Continue your Yellow Belt revision."

CTA:

- Resume
 - Quick Review
-

2. Continue Learning Row

Horizontal card carousel.

Examples:

- Tai Otoshi
- O Soto Gari

- Kesa Gatame

Each card shows:

- Thumbnail
 - Progress ring
 - Belt relevance
 - Quick resume button
-

3. Grading Progress Card

Single large visual card.

Shows:

- Current belt
- Techniques learned
- Remaining syllabus
- Confidence meter

NOT spreadsheet data.

Keep emotional.

4. Quick Drill Section

Fast-access training cards.

Examples:

- Solo footwork drills
 - Resistance band drills
 - Kuzushi drills
 - Reaction drills
-

5. Technique Explorer

Visual browse area.

Netflix-style scrolling.

Categories:

- Throws
- Groundwork
- Counters

- Combinations
 - Grips
 - Drills
-

6. Tonight's Focus

One suggested learning item.

Tiny commitment.

"Spend 3 minutes reviewing Tai Otoshi entries."

ADHD-friendly micro goals.

Navigation Architecture

Bottom Navigation

Only 5 items maximum.

Recommended:

1. Home

Daily companion.

2. Learn

Technique browser.

3. Grade

Syllabus progression.

4. Drills

Quick training tools.

5. Profile

Saved content.

Technique Experience (Core Feature)

UX Goal

Technique pages should feel:

- fast
- visual
- swipeable
- approachable
- addictive to explore

NOT like reading documentation.

Technique Page Structure

HERO SECTION

Large cinematic card.

Contains:

- Technique name
- Japanese pronunciation
- Meaning
- Belt level
- Hero video thumbnail
- Quick play

Example:

TAI OTOSHI Body Drop Yellow Belt

[Large thumbnail]

CARD SYSTEM

Card 1 — WHAT IS IT?

Purpose: Quick understanding.

Contents:

- 20-second explanation
- Primary use

- Key concept

Minimal text.

Card 2 — HOW TO EXECUTE

Step-by-step execution.

Use:

- numbered visuals
- tiny motion loops
- concise instructions

DO NOT use large paragraphs.

Card 3 — KEY CUES

Examples:

- Pull before turning
- Keep posture upright
- Rotate hips late

Short coaching phrases.

Memorable.

Card 4 — GRIPS

Visual grip options.

Each grip shown as:

- thumbnail
 - quick description
 - use case
-

Card 5 — SETUPS / ENTRIES

Important for real-world randori usefulness.

Cards include:

- movement entry

- kuzushi entry
 - combo entry
-

Card 6 — COMMON MISTAKES

One of the highest value sections.

Visual comparison cards.

✓ correct ✗ incorrect

Examples:

- bent posture
 - weak pull
 - poor foot placement
-

Card 7 — COMBINATIONS

Example:

- Ko Uchi → Tai Otoshi
- Ouchi → Tai Otoshi

Visual flow cards.

Card 8 — COUNTERS

Simple practical understanding.

Not advanced competition encyclopaedia.

Card 9 — QUICK DRILLS

Examples:

- band entry drill
- shadow movement
- foot positioning
- partner repetition

Designed for:

- home practice

- garage practice
 - pre-class warmups
-

Card 10 — VIDEO EXAMPLES

Media model:

Primary

Embedded YouTube.

Secondary

Short loops:

- MP4
 - GIF
 - annotated images
-

Media Strategy

v1 Strategy

Use YouTube heavily.

Advantages:

- Low maintenance
 - Huge content pool
 - Fast implementation
 - Familiar UX
-

Future Enhancement

Add:

- micro loops
- animated cues
- freeze-frame corrections
- annotated movement paths

These become:

"micro-learning assets"

ADHD Design Rules

Rule 1 — Reduce Choice Paralysis

Never show too many equal-weight actions.

Rule 2 — Chunk Everything

Every learning concept should feel:

small fast completable.

Rule 3 — Immediate Reward

Users should feel progress constantly.

Examples:

- streak indicators
 - completed cards
 - grading readiness
 - saved techniques
-

Rule 4 — Visual Anchors

Use:

- thumbnails
 - iconography
 - consistent card layouts
 - strong section identity
-

Rule 5 — Avoid Cognitive Fatigue

Avoid:

- long forms
 - giant menus
 - huge paragraphs
 - tiny tap targets
-

Grading Experience

Purpose

The grading system should feel motivating.

NOT bureaucratic.

Grading Dashboard

Example:

YELLOW BELT

Progress Ring: 72%

Remaining:

- Tai Otoshi
- De Ashi Barai
- Terminology Review

Confidence Meter: "Almost Ready"

Belt Page Structure

Each belt contains:

- Required techniques
 - Terminology
 - Drills
 - Common grading mistakes
 - Quick revision mode
 - Mock grading flow
-

Quick Revision Mode

Critical feature.

Designed for:

"I have class in 20 minutes."

Fast swipe review.

Examples:

- grip cards
 - terminology flashcards
 - movement cues
 - mistakes review
-

Search UX

Search Must Feel Instant

As user types:

- technique thumbnails appear
 - categories appear
 - grading matches appear
-

Smart Search Examples

Typing: "tai"

Returns:

- Tai Otoshi
- Tai Sabaki drills

Typing: "foot sweep"

Returns:

- De Ashi Barai
 - Okuri Ashi Harai
-

Retention Loops

DO NOT gamify excessively.

This is martial arts.

Need balance.

Healthy Motivation System

Use:

- streaks
- revision reminders
- grading readiness
- weekly focus goals
- saved techniques

Avoid:

- childish XP overload
 - aggressive notifications
 - fake productivity
-

Empty State Design

Important.

Never show blank screens.

Example:

"Start with your Yellow Belt syllabus"

[Explore Throws]

Future Roadmap

Phase 1

Core foundation.

Build:

- Homepage
 - Technique pages
 - Grading system
 - Video embedding
 - Search
 - Saved content
-

Phase 2

Enhanced learning.

Add:

- drill builder
 - terminology quizzes
 - quick revision mode
 - annotated imagery
-

Phase 3

Advanced learning.

Add:

- offline support
 - downloadable revision packs
 - AI coaching cues
 - community playlists
-

Technical Direction

Recommended Stack

Frontend:

- Next.js
- Tailwind
- Framer Motion

Media:

- YouTube embeds
- lightweight MP4 loops

Backend:

- Supabase or Firebase
-

PERFORMANCE RULES

The app MUST feel:

- instant
- smooth
- responsive

Target:

- minimal loading states
 - aggressive image optimisation
 - lazy-loaded media
-

MOBILE UX RULES

Thumb Reach Priority

Primary interactions must sit within lower thumb zones.

Large Tap Targets

Minimum comfortable spacing.

Motion

Use subtle motion only.

Examples:

- card hover
- smooth expansion
- swipe transitions
- gentle scaling

Avoid excessive animation.

FINAL PRODUCT FEEL

If successful, Judohub should feel like:

"The modern judo app people wish already existed."

Users should:

- open it before class
- revise techniques quickly
- feel more confident grading
- remember techniques easier
- keep returning naturally.

MASTER CLAUDE IMPLEMENTATION PROMPT

Copy everything below into Claude.

You are a senior product designer and senior frontend engineer.

You are helping build a production-quality application called JUDOHUB.

PRODUCT VISION

JUDOHUB is NOT a judo encyclopedia.

It is:

"A low-friction training companion and grading companion for busy judoka."

The app is designed specifically for:

- busy adults
- ADHD-friendly learning
- mobile-first usage
- visual learning
- grading progression
- quick revision before class
- practical randori usefulness

The experience should feel:

- premium
- modern
- calm
- focused
- motivating
- extremely easy to use.

UX PHILOSOPHY

The app should follow these rules:

1. One screen = one goal.
2. Avoid text walls.
3. Use progressive disclosure.
4. Visual learning before text.
5. Card-driven architecture.
6. Fast mobile-first interactions.
7. Netflix-like browsing for techniques.
8. ADHD-friendly chunked information.
9. Large touch targets.
10. Reduce friction everywhere.

VISUAL STYLE

Use a:

"Premium Dark Dojo"

visual style.

Design inspiration:

- modern martial arts brands
- Nike Training Club
- Headspace
- Brilliant
- Duolingo
- premium streaming apps.

Use:

- deep charcoal backgrounds
- soft blacks
- subtle gradients
- strong thumbnails
- clean typography
- large rounded cards
- smooth micro interactions.

Avoid:

- dashboard clutter
- tiny text
- spreadsheet layouts
- excessive menus.

CORE APP STRUCTURE

Bottom navigation:

1. Home
2. Learn
3. Grade
4. Drills
5. Profile

HOMEPAGE REQUIREMENTS

The homepage should contain:

1. Hero continuation card
2. Continue learning carousel
3. Grading progress card
4. Quick drills section
5. Technique explorer
6. Tonight's focus card.

The homepage must feel motivating and low-stress.

TECHNIQUE PAGE STRUCTURE

Each technique page should contain:

1. Hero video thumbnail
2. Meaning and pronunciation
3. WHAT IS IT?
4. HOW TO EXECUTE
5. KEY CUES
6. GRIPS
7. SETUPS / ENTRIES
8. COMMON MISTAKES
9. COMBINATIONS
10. COUNTERS
11. QUICK DRILLS
12. VIDEO EXAMPLES.

All sections should use visual card layouts.

MEDIA MODEL

Primary media:

- embedded YouTube.

Secondary media:

- short loops
- MP4 clips
- annotated images
- GIFs.

ADHD DESIGN RULES

- chunk information aggressively
- avoid overwhelming screens
- use strong visual hierarchy
- minimise cognitive load
- prioritise quick wins
- allow extremely fast learning sessions.

DEVELOPMENT RULES

- mobile first
- responsive layouts
- accessible contrast
- smooth animations
- fast performance
- lazy load media
- optimise images.

OUTPUT REQUIREMENTS

Generate:

1. Full app architecture
2. Component hierarchy
3. Homepage implementation
4. Technique page implementation
5. Card system
6. Dark theme system
7. Responsive design
8. Motion design guidance
9. Tailwind component structure
10. Reusable React component system.

Use:

- Next.js
- Tailwind
- Framer Motion.

The output should feel production-ready and polished.

Avoid placeholder thinking.

Think like a premium modern learning platform.
